Where to write the code?

Colab

Notebook by google

Python (Pre-Reads)

Python → Numpy

C faster

Numpy Array

[1, 2, 3, 4]

Continuous Memory Allocation

Easier & faster

Python

[1, 2, 3, 4]

Easier but time consuming

Python → list → [1, "Suraj", True]

Numpy → Array → [1, 2, 3, 4]

['1', '2', '3', '4']

Only 1 data type is possible

[1, Suraj, 2]

⇓

['1', 'Suraj', '2']
